Even though we’ve known the dangers of asbestos exposure since the 70’s, it’s still found in many US homes and commercial buildings. In fact, manufacturers can still use asbestos in certain products!

Asbestos is commonly found in insulation materials, floor tiles and floor tile adhesives, shingles, siding, millboard, sound-proofing, and wall texturing materials. This hidden hazard could be lurking anywhere in your home or commercial building.

If you suspect asbestos materials are part of your home or commercial building, it’s time to call in the reinforcements.

At Crisis Cleaning, we:
- Test for asbestos in air and materials
- Assess your building’s level of risk
- Remove or contain asbestos
- Offer ongoing asbestos management services

Our experienced, Indiana Department of Environmental Management trained technicians take the hassle out of your asbestos remediation project. We ensure that your home or business meets all local, state, and federal regulations for asbestos remediation.

Crisis Cleaning, a family-run cleaning company, started in 2001. The company focuses on meth lab testing and cleanup, death/crime scene cleanup, mold remediation, lead remediation, and asbestos management. The company’s personal touch brings calm to often difficult situations. Their IDEM certifications and licensing ensures that each job is done right.

Need to deal with asbestos in your home or place of business? Call Crisis Cleaning’s 24-hour emergency hotline.

Asbestos License No. 19A006656

Asbestos is a naturally occurring fiber that was used as an insulating, soundproofing, and wall texturing material in many homes built before the 1970s. It’s now restricted - but not banned - in the United States.

In good condition, asbestos is harmless. When damaged, though, asbestos releases microscopic fibers into the air. These fibers lodge in your lungs, building up over time. Heavy or long-term asbestos exposure can lead to lung cancer, mesothelioma, and irreversible scarring. Studies show that asbestos exposure may even cause or exacerbate bronchial asthma.

Asbestos exposure is particularly harmful for children. Since they breathe faster than adults, their lungs can rapidly stockpile harmful levels of asbestos fibers. Early, long-term exposure puts kids at risk for later lung disease and cancer.

With the right tools and training, asbestos isn’t difficult to manage. The key is to work with professionals who will remove or contain asbestos without putting your family at risk.

Why worry about asbestos?

Leaving it alone.

Sometimes, the best thing to do about asbestos is nothing at all. Asbestos material in good condition won’t release the harmful fibers. The Crisis Cleaning Asbestos Operations & Management (O&M) program takes the worry out of this approach.

Remove it.

Asbestos is most dangerous during removal, which can release large amounts of asbestos fibers into the air. But if you’re remodeling or renovating, removal can be essential.

Crisis Cleaning takes the hassle and fear out of asbestos removal. Our removal teams follow local, state, and federal asbestos removal regulations to the letter. We’ll get in, get the job done right, and get out of your way so you can get on with your renovation.

Contain it.

One way to remove the worry of asbestos without paying a fortune is containment. Our containment teams use specialized materials to coat or encapsulate hazardous sections of asbestos-containing material.

Containment keeps your family safe for a lower price. Sometimes we’ll use a combination of removal and containment. Crisis Cleaning asbestos specialists will work with you to craft a customized, budget-friendly approach for your home or commercial building.

Start with a test.

If you suspect there’s asbestos in your home, start with an air quality test. A test and thorough inspection will tell you just how much of a hazard asbestos is (or isn’t!) in your home or commercial building.

What if asbestos is a hazard? Don’t try to remove asbestos-containing materials yourself. Without the proper procedures, techniques, and materials, you’ll create more problems than you’ve solved. Asbestos fibers can hang in the air for hours or days, and they can settle on the surfaces in your home long term.

When it comes to dealing with asbestos, it’s best to leave it to the pros. Crisis Cleaning’s professional asbestos teams will get rid of the hazard in your home quickly, affordably, and with as little hassle as possible.
